Data Science Platform market size is projected to grow from USD 95.3 billion in 2021 to 322.9 USD billion in 2026, at a Compound Annual Growth Rate (CAGR) of 27.7%

Major effects from COVID 19 on Global Economy: directly impacting production and demand, causing supply chain and market disruption

Data Science Platform software are adopted for Banking, Financial Services, and Insurance (BFSI) , Retail and eCommerce, Telecom and IT, Media and Entertainment, Healthcare and Life Sciences, Government and Defense, Manufacturing, Transportation and Logistics, Energy and Utilities, Other (travel and hospitality, and education and research).

Major Data Science Platform key players include IBM(US), Google(US), Microsoft(US), SAS(US), AWS(US), MathWorks (US), Cloudera (US), Teradata (US), TIBCO (US), Alteryx (US), RapidMiner (US), Databricks (US), Snowflake (US), H2O.ai (US), Altair (US), Anaconda (US), SAP (US),

Demand Rises for Data Scientists, AI Talents
JULY 31, 2021
Jakarta. Digital talents in data science and AI, are seeing a spike in demand as more industries adopt technology adoption by industries in

Low Indonesia's BNPL Giant Leverages Data Science to Drive Innovation
by Fintech News Malaysia / September 1, 2022 / 0 comments

Digital transformation sponsored

Data science and machine learning are some of the most complex yet important business or customers. And many companies, irrespective of size, rely on them to deliver a better user experience.

But what role do data science and machine learning especially in countries like Indonesia? The lack of credit history data combines with the sweet spot for fintech companies to

Data Center Cooling Global Market Report 2022 - Focus on South Korea, UK, USA, Australia, Brazil, China, France, Germany, India, Indonesia, Japan, Russia - ResearchAndMarkets.com
September 05, 2022 06:34 AM Eastern Daylight Time

DUBLIN--(BUSINESS WIRE)--The "Data Center Cooling Global Market Report 2022" report has been added to ResearchAndMarkets.com's offering.

"Data Center Cooling Global Market Report 2022"

The global data center cooling market is expected to grow from \$10.96 billion in 2021 to \$12.48 billion in 2022 at a compound annual growth rate (CAGR) of 13.9%. The data center cooling market is expected to grow to \$21.83 billion in 2026 at a CAGR of 15.0%.

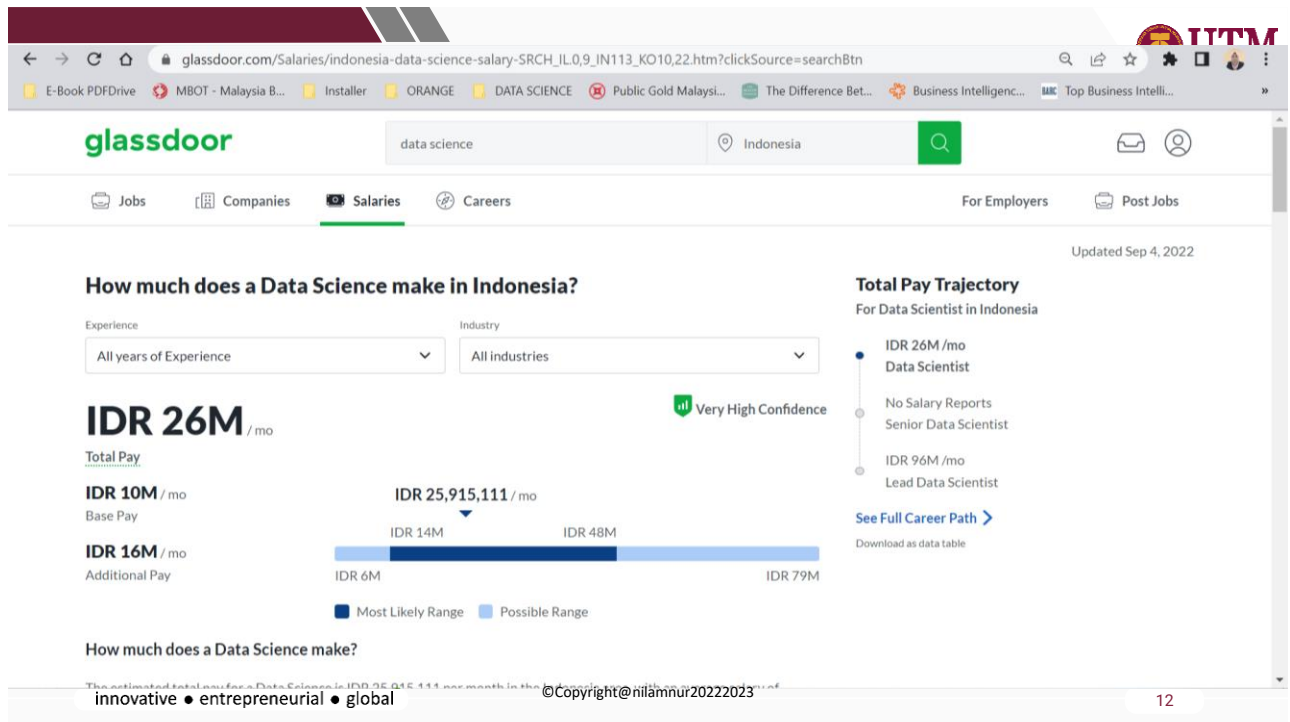

The data center cooling market consists of sales of data center cooling

What is Data Science?

19

19

What is Data Science?

Defined as an interdisciplinary field of study that uses data for various research and reporting purposes to derive insights and meaning out of that data.

22

What is Data?

The world today produces **2.5 quintillion bytes of data**

» 306.4 billion emails

» 5 million Tweets

» 95 million videos and photos sharing in social media

According to recent estimates, by 2020, our digital ecosystem will be approximately produces **44 zettabytes of data**, projected to reach 180 zettabytes by 2025.

Too Much Data, Too Little Information

Data refers to a collection of facts usually obtained as the result of experiences, observations, or experiments

25

Data

Raw, random and unorganized

Information

Data that has been organized, structured and processed. And is what you used to gain knowledge

Knowledge

what we know, accumulation of past experience and insight. which interpret, and assign meaning to, produce actionable information that can lead to impact

26

The Concept of Data, Information and Knowledge : Scenario

Let's take a look at how a foodie would approach the concept

Do you have any idea how you can differentiate between data, information and knowledge for this soup??

27

Data: A collection of ingredients sitting on the counter. They include carrots, onions, leeks, garlic, and potatoes from the farmer's market, and a package of chicken, a box of rice and some cans of broth from grocery store. In a data science concept, this is like a source of data from different operational systems.

Information: Then you get everything ready by washing, peeling, and cutting up the vegetables, cutting up the chicken and opening the cans of broth. You put it all in the pot and turn on the heat where it cooks and become soup. In data science world, the data has been move to the data science life cycle steps including clean a missing data, data aggregation, data extraction and data transformation, modeling, evaluation etc. And it is transform into information

Knowledge: Now the soup is ready to put into a bowl and eaten. In data science, business people/stakeholder consume the information in reports to gain knowledge to help them make informed business decisions

Machine Learning

Supervised Learning

- ✓ The analysis done to predict the future event or other data or trends.
- ✓ It uses the supervised learning functions which are used to predict the target value
- ✓ Input data is label
- ✓ Use training dataset
- ✓ Use for prediction

Unsupervised Learning

- ✓ basically used to produce correlation, cross-tabulation, frequency etc.
- ✓ These technologies are used to determine the similarities in the data and to find existing patterns.
- ✓ to develop the captivating subgroups in the major part of the data available.
- ✓ Input data is unlabel
- ✓ Use just input dataset
- ✓ Used for analysis for summarization and transformation of the data into meaningful information

31

31

#1

CLASSIFICATION

Assigns items in a collection to target categories or classes. The goal of classification is to accurately predict the target **class** for each case in the data

#2

REGRESSION

Regression, used primarily as a form of planning and modeling, is used to identify the likelihood of a certain variable, given the presence of other variables.

#3

TIME SERIES ANALYSIS

It is a sequence of well defined data points measured at consistent time interval

#4

CLUSTERING

Clustering is very similar to classification, but involves grouping chunks of data together based on their similarities

#5

SUMMARIZATION

It involves technique for finding a compact description of a dataset

#6

ASSOCIATION RULES

Association is related to tracking patterns, but is more specific to dependently linked variables. In this case, you'll look for specific events or attributes that are highly correlated with another event or attribute

#7

SEQUENCE DISCOVERY ANALYSIS

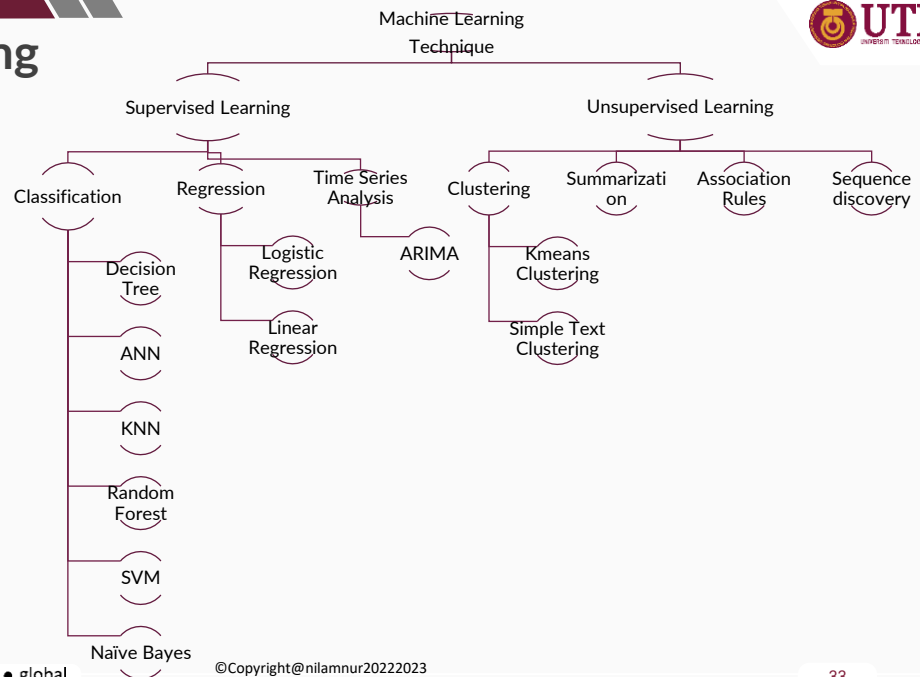

It is about finding a sequence of activity

41

41

What's So Exciting About Data Science?

5#

"Data science makes me feel powerful!"

6#

"Being able to obtain, process, and build models out of data, which will ultimately be used for their predictive capabilities [...] is incredibly exciting in my view"

7#

"Data science is our means of taming unstructured information and gathering insight."

8#

"Data scientists help improve how humans make decisions and how algorithms optimize outcomes"
